BIORENEW LARENS PRO LIFT

Larens Professional 
More than care

MANUAL treatment is recommended for all skin types, especially for mature, dehydrated skin with visible signs of ageing, facial and static wrinkles.

COURSE OF TREATMENT:

Phase I (cleaning the skin from make-up and other impurities)

1. Using a cotton pad soaked in Larens Micellar Lotion, thoroughly clean off eye and lip make-up, making sure not to leave even a hint of mascara behind.
2. Using wet hands, apply Larens Professional Repair+ Milk PRO Makeup Remover to the face, neck and neckline. Massage in circular motions to thoroughly dissolve make-up and impurities.
3. Moisten a cosmetic wrap with warm water and remove milk and impurities. Repeat until the skin is clean.
4. Using a cotton pad soaked in Larens Professional Repair+ Toner PRO, wipe the skin on your face, neck and décolleté. Alternatively, wet your hands with the toner and apply it in "compresses" to the treatment area.
5. Dry your complexion with a cosmetic wipe.

Phase II (increasing the permeability of the epidermis)

1. Apply Larens Professional Deep Face Peeling with a brush to the face and leave it on for 2 to 4 minutes, depending on the client's skin predisposition. The burning sensation that will occur is not a side effect but a natural reaction of the skin. Wash off the preparation with a compress.
2. Apply Larens Professional Neutraliser to the treatment areas and leave on for approximately 2 minutes. NOTE: More redness and discomfort may occur at this stage
3. Wash off the product with a compress and pat the skin dry with a cosmetic wipe.

Phase III (active phase)

1. Apply Larens Professional Biopeptide Active Coctail to the palms of your hands. Spread over the face, neck and neckline. Then continue to introduce with stamping movements until the serum no longer sticks to the hands. Properly absorbed, the serum will give the skin a tightened and smoothed appearance. This takes approximately 5-8 minutes.
2. Take Larens Professional Massage Oil and massage onto the face, neck and neckline with an emphasis on shaping movements.
3. When the massage is complete, wash off the oil with a cosmetic wrap moistened with warm water.

Phase IV (consolidation of effects)

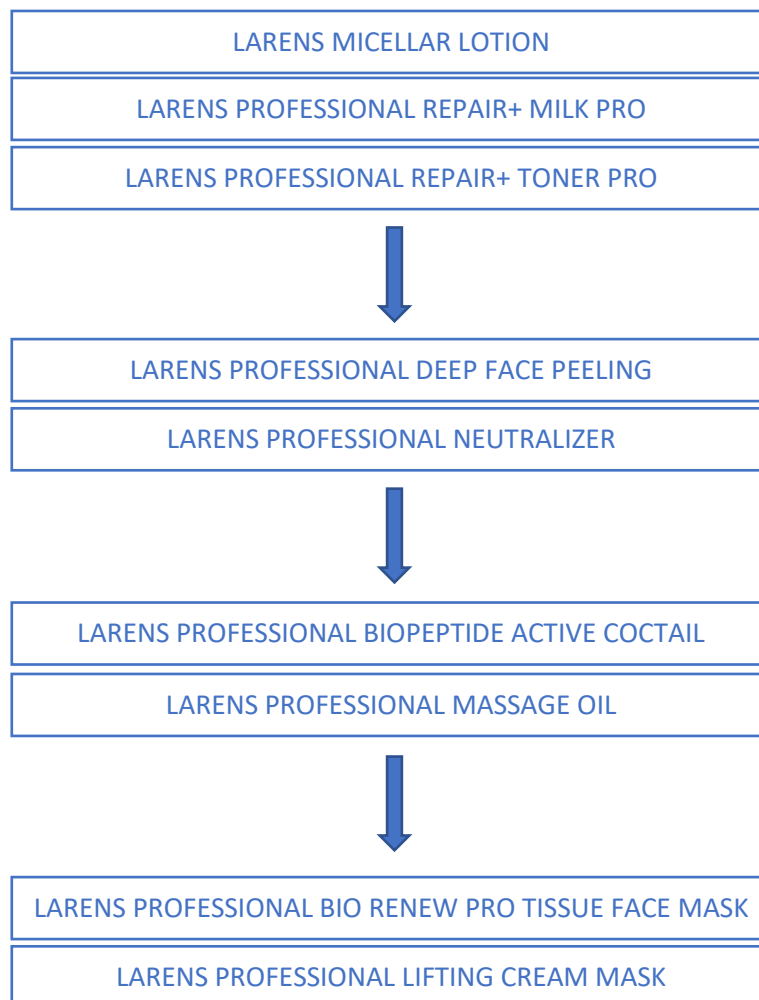

1. Spread Larens Professional BIO Renew PRO Tissue Face Mask. Carefully apply the tissue to the skin. Adjust the mask to the contours of the face. Leave on for 20 minutes.
2. Remove mask. Gently massage excess gel essence into skin with fingertips.
3. If necessary, pat skin dry with a tissue.
4. Take Larens Professional Lifting Cream Mask with a spatula and apply to the face, neck and neckline. Massage in until absorbed

Phase V (end of treatment)

1. Discuss the feelings and effects of the treatment with the client.
2. Inform the client of post-treatment recommendations:
 - × Do not wash off skin for at least 3 hours after treatment.
 - × On the day of treatment, avoid so-called dirty work.
 - × Do not wear make-up on the day of treatment.
 - × Do not perform peeling on the treated skin for 10 consecutive days.
 - × Avoid saunas and sudden temperature changes for one week.
 - × Avoid tanning beds and sunbathing for 14 days
3. Remember to write a "prescription" with the recommendation of an appropriate home care treatment with Larens cosmetics and the recommendation of further professional therapy in the office.

Treatment effects:

- Improves skin tone
- Evens out skin tone
- Regenerates and stimulates the skin to produce collagen and elastin
- Excellent as a banquet treatment
- Has a "progressive" effect - despite the effect immediately after treatment, the effect deepens after 2-3 days
